

NIST CSF 2.0 PROGRAM

Cybersecurity Program Charter (NIST CSF 2.0)

The top-level charter aligning BVTech's security program - and the managed service it delivers to clients - to the six functions of NIST CSF 2.0.

Document ID	BVT-CSF-160
Version	1.0
Effective date	July 28, 2026
Document owner	Jordan Polasek, Managing Partner
Classification	Internal - BVTech LLC Confidential
Review cycle	Annual, or upon material change

Commitment

BVTech LLC operates a cybersecurity program structured on the NIST Cybersecurity Framework 2.0. The Managing Partner is accountable for the program; every function below has documented policies, operating procedures, and evidence in this library.

The Six Functions

- GV Govern - The organization's cybersecurity risk management strategy, expectations, and policy are established, communicated, and monitored.
- ID Identify - The organization's current cybersecurity risks are understood.
- PR Protect - Safeguards to manage the organization's cybersecurity risks are used.
- DE Detect - Possible cybersecurity attacks and compromises are found and analyzed.
- RS Respond - Actions regarding a detected cybersecurity incident are taken.
- RC Recover - Assets and operations affected by a cybersecurity incident are restored.

Program Governance

Function profiles (BVT-CSF-161..166) define category-level implementation. The current-vs-target profile worksheet (BVT-CSF-167) is refreshed annually and drives the improvement roadmap. Client-facing services map to these same functions (BVT-CSF-168), so every client deliverable traces to a framework outcome.
