

## NIST CSF 2.0 PROGRAM

## CSF 2.0 Function Profile - ID Identify

Category-level implementation profile for the Identify function: The organization's current cybersecurity risks are understood.

|                |                                    |
|----------------|------------------------------------|
| Document ID    | BVT-CSF-162                        |
| Version        | 1.0                                |
| Effective date | July 28, 2026                      |
| Document owner | Jordan Polasek, Managing Partner   |
| Classification | Internal - BVTech LLC Confidential |
| Review cycle   | Annual, or upon material change    |

### Function Outcome

The organization's current cybersecurity risks are understood.

### Category Implementation

- Asset Management: Hardware, software, services, and data are inventoried automatically via RMM and reviewed quarterly; assets are classified by criticality.
- Risk Assessment: Threats, vulnerabilities, likelihood, and impact are assessed at least annually and on major change; KEV-listed vulnerabilities are treated as actively exploited.
- Improvement: Lessons from assessments, incidents, and exercises drive documented improvements to controls and this program.

### Evidence Sources

Evidence for this function lives in the OpsPilot portal (posture history, audit log, training records, incident records) and the referenced BVT policy and checklist documents. Review annually with the profile worksheet.
