

## NIST CSF 2.0 PROGRAM

## CSF 2.0 Function Profile - PR Protect

Category-level implementation profile for the Protect function: Safeguards to manage the organization's cybersecurity risks are used.

|                |                                    |
|----------------|------------------------------------|
| Document ID    | BVT-CSF-163                        |
| Version        | 1.0                                |
| Effective date | July 28, 2026                      |
| Document owner | Jordan Polasek, Managing Partner   |
| Classification | Internal - BVTech LLC Confidential |
| Review cycle   | Annual, or upon material change    |

### Function Outcome

Safeguards to manage the organization's cybersecurity risks are used.

### Category Implementation

- Identity Management & Access Control: Unique identities, enforced MFA, least privilege, and lifecycle-managed accounts per the 3.1/3.5 policies.
- Awareness & Training: Cyber Academy training with tracked completion and quarterly phishing simulation.
- Data Security: Data is classified, encrypted in transit and at rest where required, backed up on the 3-2-1 pattern, and destroyed per NIST 800-88.
- Platform Security: Hardened baselines, timely patching, EDR on every endpoint, and application control on high-risk systems.
- Technology Infrastructure Resilience: Redundant backups, tested restores, UPS protection, and documented recovery objectives (RTO/RPO) per client.

### Evidence Sources

Evidence for this function lives in the OpsPilot portal (posture history, audit log, training records, incident records) and the referenced BVT policy and checklist documents. Review annually with the profile worksheet.
