

SECURITY STANDARDS

Remote Access Standard

Every path into a managed network, enumerated and controlled.

Document ID	BVT-STD-247
Version	1.0
Effective date	July 28, 2026
Document owner	Jordan Polasek, Managing Partner
Classification	Internal - BVTech LLC Confidential
Review cycle	Annual, or upon material change

Standard

1. Approved paths

Company VPN with MFA, vendor-supported remote tools with per-session consent, and the RMM's audited remote control. Everything else - especially exposed RDP - is prohibited.

2. Device posture

Remote access requires a managed, encrypted, EDR-protected device; personal devices use virtual desktop or web-only access.

3. Session controls

Sessions log user, source, and duration; idle sessions terminate; vendor access is time-boxed and sponsored.

4. Home networks

Technicians follow the remote-work standard: WPA2/3, updated router firmware, no shared household use of work devices.

5. Revocation

Remote access dies with the account - offboarding removes VPN, RMM, and tool access same-day.

Compliance

Deviations require a written exception (BVT-FRM-267) with compensating controls and an expiration date. This standard is reviewed annually.
