

Risk Register Template

Standing register for BVTech and per-client risk tracking (GV.RM)

Document ID: BVT-INT-069

Version: 1.0

Issued: July 02, 2026

Effective Date: _____

Scoring

Likelihood 1–5 (rare → almost certain) × Impact 1–5 (negligible → severe) = Risk Score. 15+ = Critical (treat now), 8–12 = High (treatment plan required), 4–6 = Medium (monitor with owner), 1–3 = Low (accept with review date). Treatments: Mitigate, Transfer (insurance/contract), Accept (documented — use BVT-SEC-021 for client risks), Avoid.

#	Risk Description	L	I	Score	Treatment & Plan	Owner	Review Date

Common MSP-Relevant Risks to Seed the Register

- Single point of failure in staffing for critical skills (documented runbooks mitigate).
- RMM/tooling supply-chain compromise (vendor tier-1 controls, MFA, least privilege — BVT-POL-041).
- Client declines critical security control (BVT-SEC-021 waiver + insurance verification).
- Backup key loss (escrow verification — BVT-IRP-051).
- Concentration: one client > 25% of revenue (business risk; diversify pipeline).
- Server hosting single-instance dependency (e.g., OpsPilot on one VPS — snapshot + offsite dump schedule, tested).

Review Cadence

Quarterly review by the security officer; Critical risks reviewed monthly until reduced. New risks may be added by anyone at any time — adding a risk is a contribution, not an accusation.
