

Microsoft 365 Administration Runbook

Standard tenant configuration and daily administration

Document ID: BVT-RUN-053

Version: 1.0

Issued: July 02, 2026

Effective Date: _____

Tenant Security Baseline (Apply to Every Managed Tenant)

- Identity: Security Defaults or Conditional Access requiring MFA for all users; block legacy authentication; named admin accounts (no shared 'admin@'); break-glass account excluded from CA, monitored, credentials sealed.
- Admin roles: least privilege via role assignment (Helpdesk Admin, Exchange Admin, etc.) — Global Admin limited to 2–4 accounts; use GDAP for BVTech delegated access, scoped and time-reviewed.
- Email auth: SPF, DKIM enabled per domain, DMARC record published (start p=none with rua reporting, move to quarantine/reject after review).
- Audit: Unified Audit Log confirmed ON; mailbox auditing on; alert policies for admin changes, forwarding rules, and mass deletions.
- Exchange: external-sender tag on; auto-forward to external blocked; common attachment filter on; anti-phish policies tuned (impersonation protection for executives).
- SharePoint/OneDrive: external sharing set to 'new and existing guests' or stricter per client; anyone-links disabled or expiring; sync restricted to managed devices where licensed.
- Defender: Safe Links / Safe Attachments where licensed; Secure Score reviewed quarterly with client.

Standard Operating Procedures

New User

- 1 Verify request from authorized contact (L2+, BVT-OPS-028).
- 2 Create user from department template; assign license; set usage location.
- 3 Add to groups per role matrix; configure MFA at first sign-in (TAP where available).
- 4 Enroll device / app protection; send welcome email with first-day instructions; ticket closed with checklist attached.

User Termination

- 1 Verify authorization; confirm effective date/time.
- 2 Block sign-in; revoke sessions; reset password.
- 3 Convert mailbox to shared (or set litigation hold per client policy); grant manager access per written approval.
- 4 Remove licenses after mailbox conversion; remove from groups; wipe corporate data from mobile (selective wipe).
- 5 OneDrive: grant manager temporary access (default 30 days); document all grants in the ticket.

License Management

- Monthly reconciliation: assigned vs. billed vs. active; reclaim unused licenses.
- Track NCE term commitments before reducing seats; document renewal dates in PSA.

Health Checks (Monthly)

- Secure Score trend; risky sign-in report; stale guests and unused apps review; DMARC report scan; admin role membership re-verified; audit that break-glass creds remain sealed and unused.
